

Do you know how your **district heating** is performing? Check up on your **cooling performance** and start saving money.

## Could you save money on cooling?

In a typical yearly financial statement staff costs, purchase and revenue take focus. But do you know your company's expenses to technical installations? If your company is like most it is probably much higher than you think.

In Denmark no less than 40% of the total energy consumption is directly related to building operations. Out of this especially heating systems are large energy consumers.

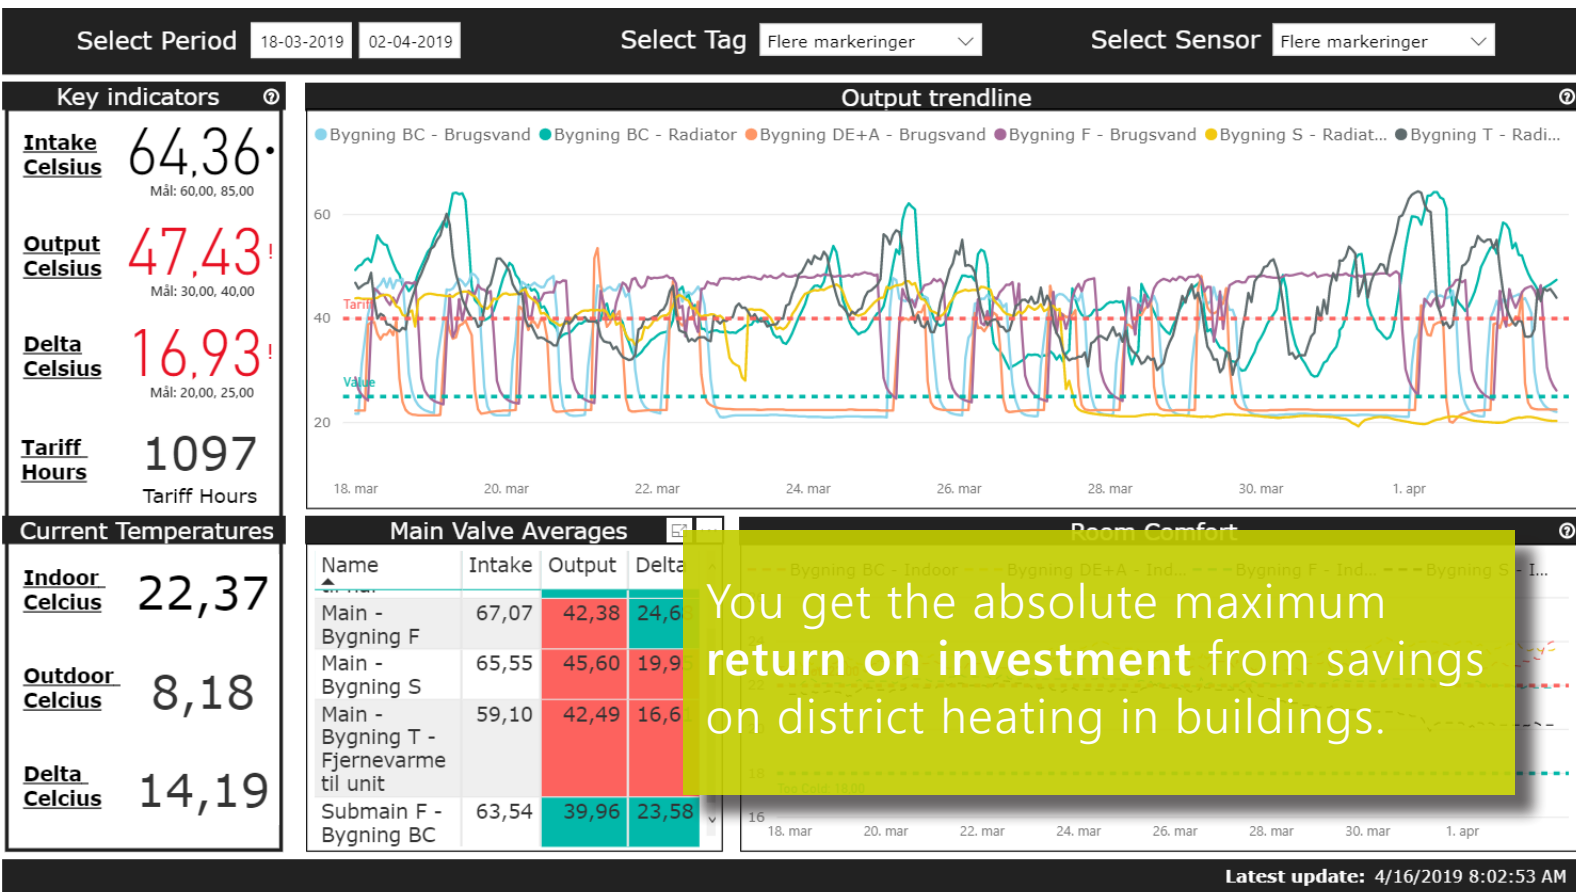

### Non-correct cooling is expensive

In case your cooling is not working properly you risk an additional bill from your heating plant. Most heating plants issue extra bills if the average cooling per year turns out too bad.

Not cooling down the return water can get expensive - not at least when we are talking cooling down thousands of liters.

### Avoid extra bills

Monitor your water flow temperature in received and returned water to know exactly how your district cooling is performing. If it does not perform well, don't worry. We provide alarms to help you find and solve the problem so you avoid extra bills.

## Save money with HeatMoniSpot

Monitor your hot water pipes with HeatMoniSpot – the wireless clamp-on sensor for temperature measurements. This sensor controls the balance of the heating water running in and out of the building. When the sensor has been installed you will notice when a problem occurs thanks to a visibly changing data pattern or the AI-based alarms.

Save money on cooling by monitoring the different water temperatures in your pipes. A cost-efficient and easy solution.

## ReMoni is all about saving resources!

The award-winning Danish company develops, designs and manufacturers innovative solutions for resource and energy optimization. With patented clamp-on technology, combined with artificial intelligence and algorithms, ReMoni helps companies, building- and energy managers save money and resources; in an easy, secure and affordable way.
