

HeatMoniSpot

Save resources and money with the **temperature measurement sensor** HeatMoniSpot. The clamp-on sensor enable you to set AI generated alarms.

Avoid transmission loss with HeatMoniSpot

HeatMoniSpot is an indicative heat flow sensor, used for surveillance and alarms. By monitoring the supply and return temperatures of your cooling and heating pipes with HeatMoniSpot you can identify if the cooling is too low, resulting in costly transmission losses.

The temperature probes on HeatMoniSpot are simply mounted on the outside of the pipe you wish to monitor by using industrial graded aluminium tape. The built-in data-logger and wireless radio make it very easy to install and setup for online monitoring.

Installing a HeatMoniSpot is easy and quick. Find how how by visiting the Knowledge Center on our website.

Avoid transmission loss with HeatMoniSpot

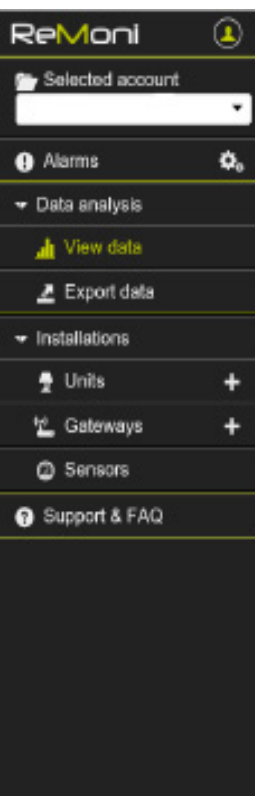

You should always base your decisions on data if you want to avoid expensive transmission loss in your heating system.

Monitor your hot water pipes with HeatMoniSpot – the wireless clamp-on sensor for temperature measurements.

HeatMoniSpot controls the balance between the temperature of the water running in and out and enables you to set an alarm in case of any irregularity in the water temperature.

Saving resources is important. So is saving money.

It's **small, discreet** and **intelligent!** HeatMoniSpot can monitor any hot water flow in your building and can be installed on the outside of all pipes providing **solid** results. On the spot.

- Installation: Clamp-on outside the pipes.
- Typical installation time: 1 minute.
- Battery lifetime: ~15 years.
- Measurement probes: Two
- Coherent solution. HeatMoniSpot transmit real-time data from your equipment to our cloud-based platform ReCalc MoniTor.

ReMoni delivers a full scale solution.

ReMoni - resource saving technology

ReMoni is an award-winning Danish company which develop, design and produce innovative solutions for resource and energy optimization.

With patented clamp-on technology, artificial intelligence and algorithms, ReMoni helps companies, building managers and energy managers save money and resources in an easy, secure and affordable way.

Resource Monitoring.
That's our name and that's what we do.
